Frame Colors Available in
Almond & White

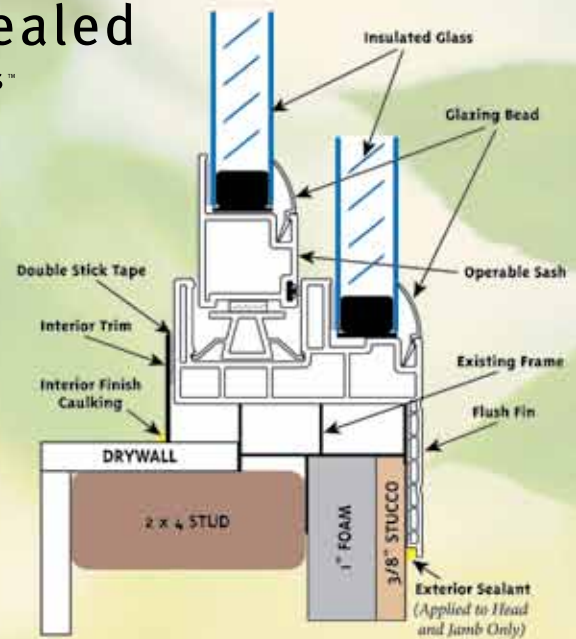

All windows and doors are
ENERGY STAR® qualified.

Eco-View
enviro  sealed
windows™

Flush Fin window for most retrofit applications. This feature eliminates most stucco, sheet rock, and paint repairs when replacing your old windows.

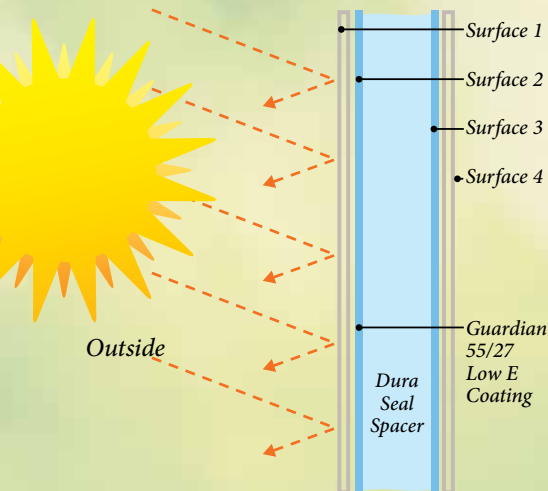

The Eco-View vinyl window products incorporate all the latest technologies in energy efficient frame design without sacrificing form or function. The Eco-View frame is comprised of 100% virgin PVC (vinyl) material and a very sophisticated system of hallways in the extrusion that serve to both strengthen the frame and circulate air through the frame, making it more energy efficient and resistant to warping and fatigue.

The glass units offer the latest in spacer technology with True Seal's "EnviroSealed" window program, which includes "Duraseal," a warm edge spacer component, and either one or two panes of Low E, depending on the Solar Heat Gain Requirements of each circumstance. Refer to the chart below to see the benefits of Eco-View.

Eco-View is very pleased to be an ENERGY STAR® partner and very excited about offering products that will aid in our industry's move toward "Green Building."

*Eco-View with Low E Glass
Guardian 55/27 Low E Coating
is applied to the 2nd surface.*

U value and Solar Heat Gain Coefficient Range			
	U Value	SHGC	Green Rating
Aluminum frames with clear glass (Duraseal spacer)	.66	.66	
Aluminum frames with Low E Glass (Duraseal spacer)	.52	.25 to .26	
Vinyl frame with clear glass (Duraseal spacer)	.49	.64 to .72	
Eco-View with Low E glass (Duraseal spacer)	.34	.23 to .25	
Eco-View with Cool Ray glass (2 Lites of Low E and Duraseal spacer)	.34	.20 to .22	
Eco-View with Eco Max (Low E, Argon, and Duralite spacer)	.28	.23 to .25	

8000 Series Dimensions
